

## NEUROLEADERSHIP

This innovative new workshop explains the emerging field of neuroscience as applied to leadership behaviours including the neuroscience of employee engagement, growth mindsets and innovation, how the brain influences change resistance points, leadership self-awareness and EQ, influencing culture and leveraging the social nature of the workplace.

### Content

- Understand the practice of neuroleadership and the fundamentals of neuroanatomy.
- How leadership behaviours impact upon the neurobiology of employee engagement.
- Culture and the Head / Heart / Hands model of leadership
- Recognise why reward is critical to team and individual motivation, and how you can leverage it effectively.
- Understand the impact of environment, and how you can design your organisation to optimise performance and engagement.
- Understanding the basic human needs at work, and how they impact on the execution of strategic and operational business, particularly change management.
- Apply practical and effective actions to build neuroleadership into daily leadership practice.

### Outcomes

- Increase self-awareness and incorporate neuroscience principles in to personal leadership mindsets and behaviours.
- Understand and influence employee and team workplace values and behaviours.
- Strategically work in a way that delivers results by understanding key human drivers and behaviours to shape culture.

### Who Should Attend

Managers, Leaders and emerging managers who want to incorporate the emerging field of neuroscience in to their leadership behaviours.

### Benefits to You and Your Organisation

Leaders will learn skills and tools on how to build a working environment that aligns with human motivation, providing the platform for effective decision making, action orientation, and a collaborative culture of achievement.
